

## Jupyter controls cheat sheet

### How to start

Navigate to the directory containing the ipython notebook and hit

```
jupyter notebook iris_ml.ipynb
```

It should open a tab in your default internet browser.

### Hotkeys

#### Key

<b>Enter/return</b>	Enter edit mode on current block
<b>Shift + enter</b>	Run current block and move down to the next block
<b>Command/control + enter</b>	Run current block
<b>Option/alt + enter</b>	Run current block and enter cell below
<b>Control + shift + up/down</b>	Move up/down a cell

### Clickable controls

#### In current cell:

From left to right: duplicate cell, move up, move down, insert cell above, insert cell below, delete.

#### At the top of the document

From left to right: Save, insert cell below, cut, copy, paste, run cell and advance, stop kernel, restart the kernel, restart the kernel and run all cells, change cell type (this is only important when you create your own jupyter notebook).
